

ICON FRESH

AIR TREATMENT SYSTEM

ICON FRESH AIR TREATMENT SYSTEM

- Humidity control without using conventional heater or dehumidifier
- Eliminates condensation and fungus
- To improve indoor air quality

ICON PRODUCT INNOVATION in a nutshell

- ✔ Resolves high humidity at source by removing water from the air.
- ✔ Independently can achieve required humidity and temperature.
- ✔ Utilizes chilled water or refrigerant designed for Air Handling Unit (AHU) to condense the water in the fresh air intake via Pre-cool Coil System ("PCC"). As such, this method does not use extra chilled water (or chiller capacity) or refrigerant.
- ✔ Precision engineering, no heaters require, therefore no additional electrical power.

ICON Optional Extra

HEPA Filter

Activated Carbon Filter

Primary filter secondary filter

EC Fan

UV-C light

Controls

**Hepa Filter, with
99.997% efficiency**

**Activated Carbon
Filter for Odour removal**

EC Fan for energy savings

**UV-C light with 275 nanometer
wavelength for effective
bacteria and jelly removal**
